

- Matcha festival day operations software Shared by Gav
 - + You already have Framer open
 - Q Just paste the code I gave you
 - One-click publish
 - You were almost there!
- </> **Section 4: Railway (Requires More Steps)**
- Still need to create the app locally OR in another platform
- Push to GitHub
- Then connect Railway to GitHub
- More complex setup
-

My Recommendation:

Since you already have Framer open (from your earlier screenshot), let's just use that! Remember the Framer-compatible code I gave you? Let's try that again:

- Open your Framer project
 - Delete the old code in your Code Block
 - Paste the **framer-festival-dashboard.jsx** file I created (it's in your downloads)
 - Drag the component onto the canvas
 - Make it full screen
 - Click "Publish"
- Done!**
-

Want to try Framer again, or would you prefer StackBlitz/Replit?

Let me know and I'll give you the exact clicks for whichever one you choose!
